

Website Testing: 10/03/2023

Feature implemented by: Saahil Shah (ss2357)

Feature tested by : Tope Balogun (tb520)

Functionality Testing: (Errors Fixed)

Cross-Browser compatibility:

- Website functionality in safari browser(MacBook): works fine and all the pages are displaying perfectly. ✓
- Website functionality in Google Chrome: Error, the login and registration pages don't display correctly, the checkbox and radio button is outside the form, the place holders for the input fields don't show. These pages originally had a checkbox to click on to show the password. Fixed, the background color was originally `rgba(0,0,0,0.5)`, this opacity was hiding out the place holders so i changed it to `rgb`. Positioning the checkboxes would also reflect the website in safari, therefor i decided to remove the checkbox and add an eye icon instead.
