YOUDLE

What is Youdle?

Youdle is a new online learning system with interactive gamification elements as well as resourceful sources which will help students.

Additional information

 Our group decided to create this edutainment which aims to provide useful content for computing students, especially university students, as after Covid the change from practical learning for computing reduced drastically due to covid & everything being online, making it hard for students to grasp the enjoyment for it, especially students who find it difficult to self-learn. Our website provides general Computing quizzes from easy too hard to help exercise the brain of a computing student. In addition, we provide various informative sources which can help the student to further their interest in computing. In terms of the quiz, it will be a multiple choice-based quiz, this is useful, quick & interactive as they will be able to play them in the quizzes to encourage peer to peer learning. The purpose of this project is to encourage students to learn, socialise and to have fun with it.
