Further Discussion: Aziz suggested combining Tope and Saahil ideas. He thought that we should do a subscription service for articles and learning materials. The materials would be tailored to the course that the person is studying, and it would mainly be about computing/computer science. They would pick a range of weekly topics they are interested in such as Cybersecurity, genetic algorithms, AI and other things and they will get sent materials Via email.
If they're happy with the materials, they would be able to let us know through clicking. reviewing it on the website or through email and they'll get more of the same content. and if they're not okay with it , they can change their preferences and get different. content to study.

Further Discussion:
Look into stack overflow. Supervisor suggested that we may need to
remove nicknames and score entries. Supervisor suggested that it would be extremely hard
to get a high mark and it would not be technical enough. Supervisor suggested that we
remove the scroll bar on the leader board, 'It looks tacky.' Clifford should change the
comments sections. So that it allows users to comment on each YouTube video. There
needs to be a consistent colour and text size for the technical report. This is our final
meeting for this project. We have completed the project and there is nothing else that needs
to be done.
